Researcher

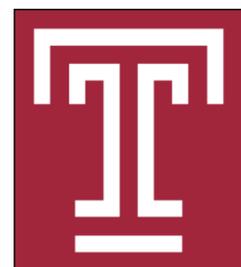

THE *project*

makeitgreen VR

OUR *promoters*

OUR *aim*

The aim of the project is to **sensitize people about the environment care** and sustainability, considering circular economy and reusable materials

We focused especially on **disposable plastic damages**

OUR *aim*

Plastic is modifying our food chain:
each one of us eats **8 grams of
plastic every week**

Each item of plastic we buy
produces CO₂ by being created
and more by being incinerated

TARGET AND *theories*

High school students (from 15 to 19)

Social Cognitive Theory: self-efficacy
and moral disengagement

Biological issues and consequences

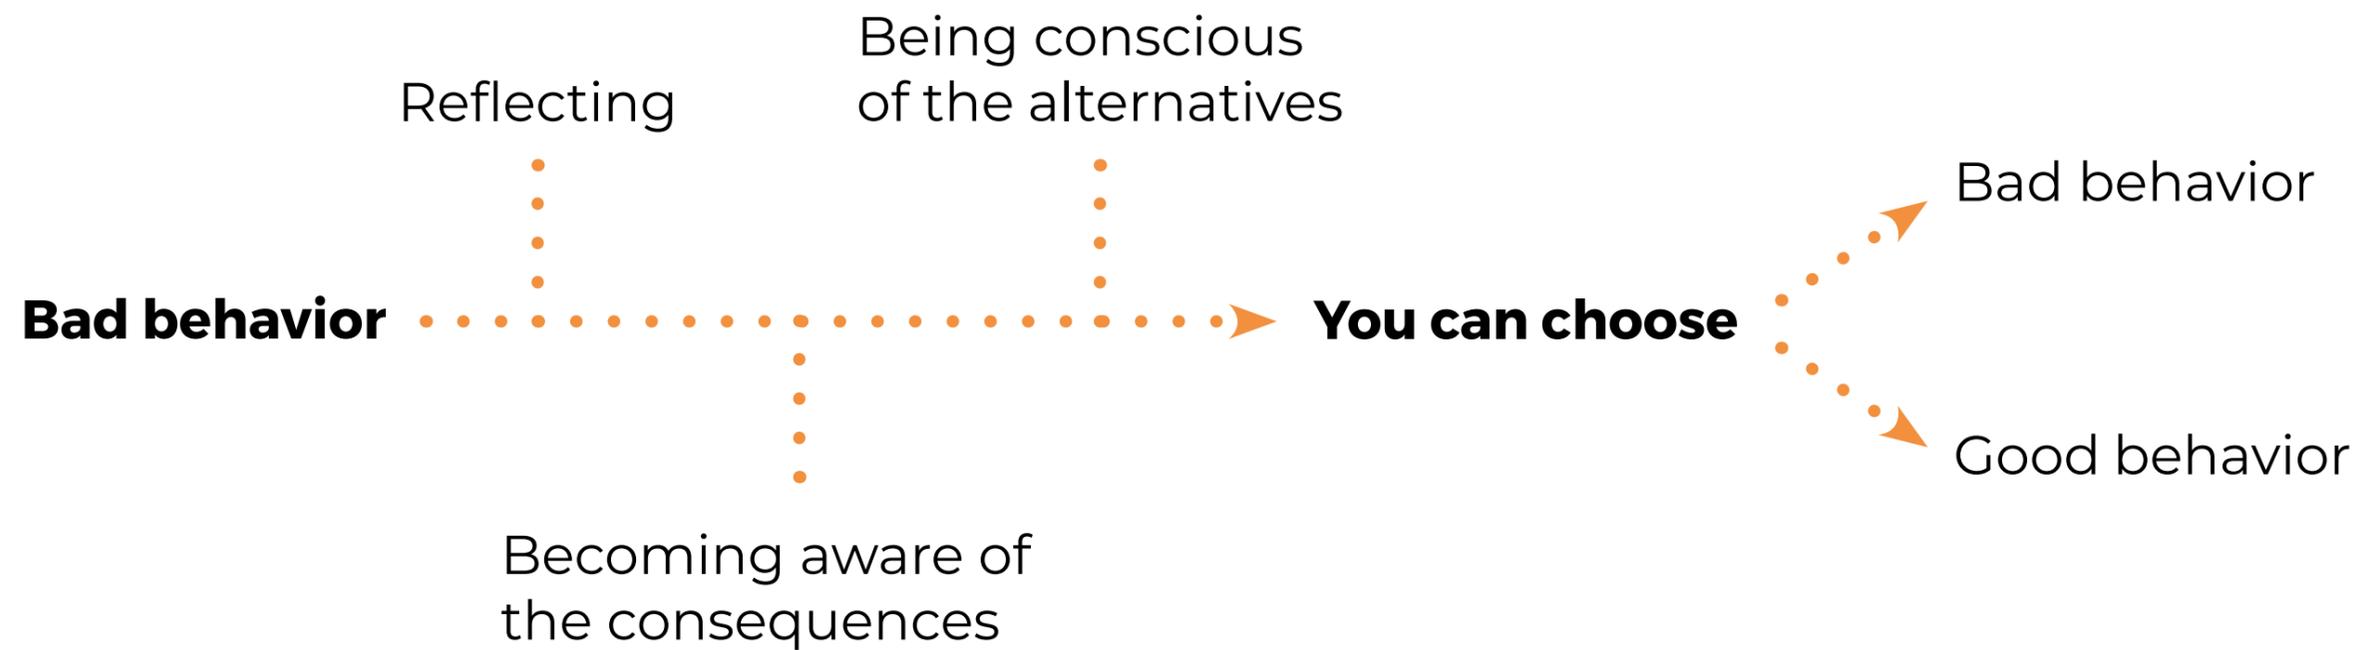

TARGET AND *theories*

Self-efficacy considers how capable we feel towards a task, so we tried to improve people's skill challenging them in taking care of the environment through our game

Moral disengagement considers the way we justify our bad behaviors to ourselves, so we tried to make people aware of the negative consequences of their actions on the environment

EDUCATIONAL *game*

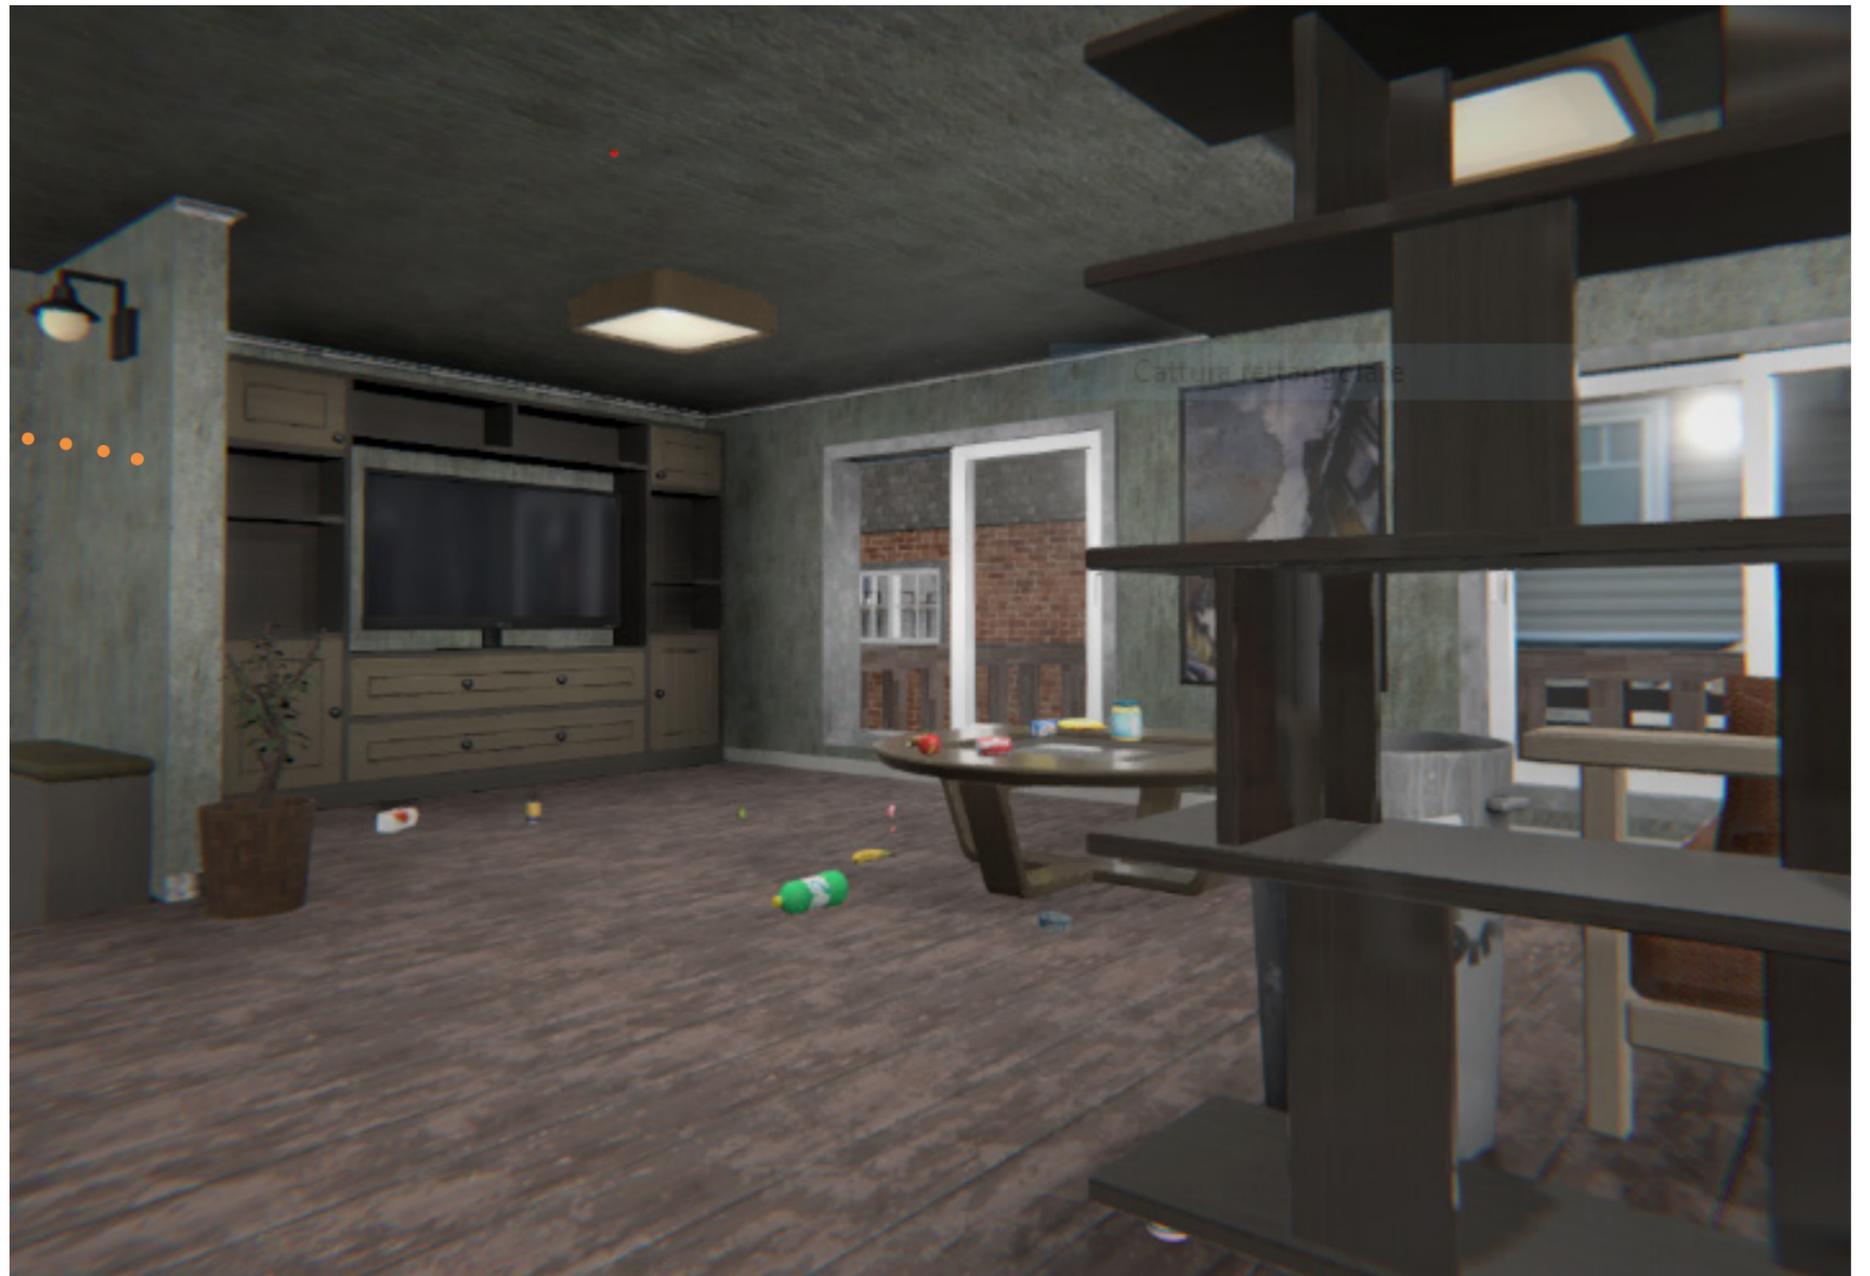

BEFORE

US

REDUCE - REUSE - RECYCLE

Level 1
House
Sensitize on
waste recycling

BEFORE *US*

REDUCE - REUSE - RECYCLE

Level 2
Campfire
Sensitize on
cleaning the
environment

OUR *level*

REDUCE - REUSE - RECYCLE

Level 3
Supermarket
Educate to reuse

VIRTUAL *reality*

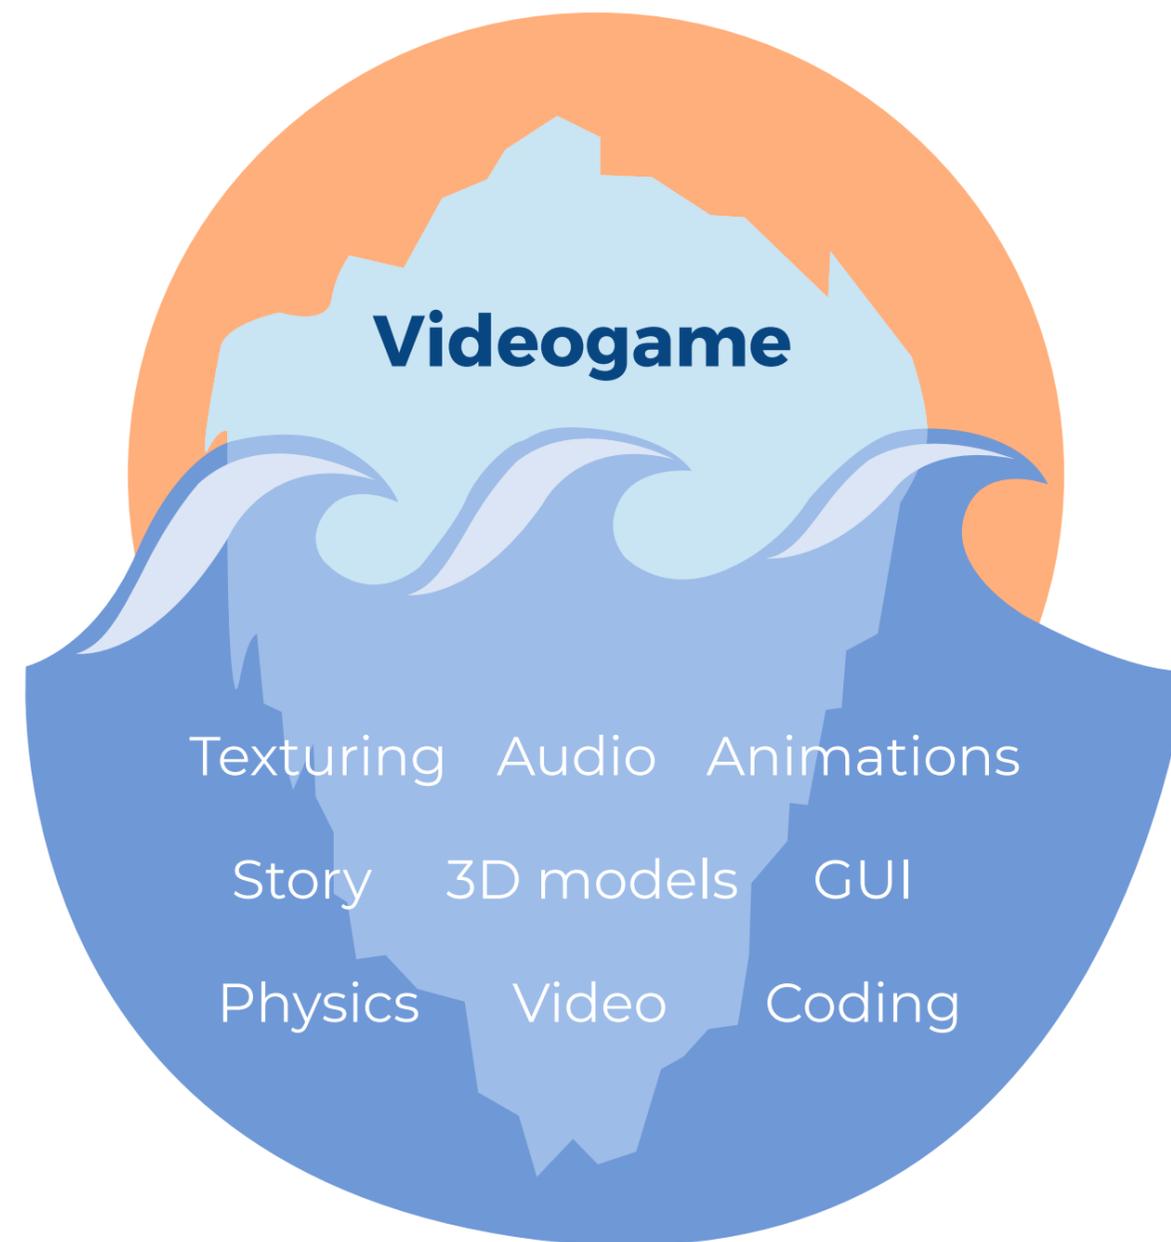

Computer generated simulation
of an **interactive three-
dimensional environment**

Virtual reality used in
educational field

OUR *gamification*

What you see of a videogame is only the **top of the iceberg**: behind there's a complex work that involves different aspects and abilities

WE USED *unity*

The computer programming of the video game was made using Unity as a **graphic engine**

Many items situated in the supermarket were **modeled** from scratch, **colored** and then moved to Unity platform

GRAPHIC AND *multimedia*

After the game, **the performance will be commented** on the basis of the products the video player will have chosen

- Causes of behaviors
- Consequences
- Reusable alternatives

GRAPHIC AND *multimedia*
